The screenshot displays a Windows desktop environment. In the background, an IDLE 3.9.8 window is open, showing a Python script with the following content:

```

10 the temperature is low
42 the humidity is low
43 the temperature is absolutely high
99 the humidity is definitely high
45 the temperature is absolutely high
17 the humidity is low
52 the temperature is absolutely high
94 the humidity is definitely high
12 the temperature is low
66 the humidity is ok & normal
>>>

```

In the foreground, a custom Python script window titled 'pt.py - C:/Users/ADMIN/AppData/Local/Programs/Python/Python39/pt.py (3.9.8)' is open. It contains the following code:

```

import time #importing the time lib
import random #importing the random lib
i=0 #initiating with 0
while (i<5): #iterating only for 5 times
    i=i+1
    time.sleep(1) #1sec
    temp=random.randint(0,80)
    humid=random.randint(1,100)
    if temp<=15:
        print(temp,"the temperature is low")
    elif temp<=25:
        print(temp,"the temperature is ok & normal")
    else:
        print(temp,"the temperature is absolutely high")
    if humid<=50:
        print(humid,"the humidity is low")
    elif humid<=80:
        print(humid,"the humidity is ok & normal")
    else:
        print(humid,"the humidity is definitely high")

```

The Windows taskbar at the bottom shows the system clock as 7:54 PM on 17-Nov-22, along with various application icons and a weather widget indicating 52°F and a temperature drop.
